SUMMARY

As a front-end developer with knowledge in React, Redux, TypeScript, and other front-end tools, I bring a comprehensive skill set to projects. I have hands-on experience in building robust web applications using React, leveraging Redux for state management, and ensuring type safety with TypeScript. Additionally, I am proficient in utilizing tools like Webpack, Babel, and ESLint to streamline development workflows and maintain code quality. With a solid understanding of modern front-end development practices, I am adept at creating efficient and maintainable code.

EDUCATION

- 07/2020 - 05/2023 • Bachelor of computer application
Shri chimanbhai patel institute of computer application
- 10/2023 - NOW • Master of computer application
Indira Gandhi National Open University

TECH SKILLS

CSS Preprocessing	Responsive Design	Web Performance Optimization	Front-end Frameworks
Testing/Debugging	Communication	Version Control/Git	

EXPERIENCE

- 05/2023 • Fronted Engineer
Bytesved Technology
Location
Experienced professional with a strong background in front-end development, specializing in React, Redux, and Redux Toolkit. Proficient in building responsive and visually appealing web applications using HTML, CSS, Bootstrap, and SCSS. Skilled in utilizing libraries like Material-UI (Mui), Formik, and Yup to streamline form development and validation processes. Adept at collaborating with cross-functional teams to deliver high-quality software solutions. Passionate about staying updated with the latest trends and technologies in web development.

PROJECTS

Marriage Certificate online

📅 11/2023 - 01/2024 📍 Location

Developed a web application for managing marriage certificate requests, allowing users to submit their details and necessary documents online. The application supports two languages, English and Gujarati, to cater to a wider audience. Upon submission, administrators can review, approve, or reject applications, with notifications sent via email to keep users informed of their application status. Admins can also view and download applications for record-keeping and further processing. The application streamlines the marriage certificate issuance process, making it more efficient and user-friendly.

- In this projects i am learned about language switching

Flex-Force

📅 08/2023 - 10/2023 📍 Location

The Flex Force project is a platform where clients can upload their projects, and consultants review and match their skills to apply for these projects. The platform includes a feature for clients to conduct initial interviews with consultants directly through the application.

The project management module includes roles for clients, consultants, administrators, and super administrators. Administrators manage project details, including which projects are in progress, the number of clients and consultants involved, and other relevant project information. If a consultant is selected for a project, they are assigned to the project to begin work. The platform aims to streamline the process of matching consultants with projects and managing project details efficiently.

- In this project, I am learned about MicroFrontend.
